Profile

Passionate Software Engineer with strong skills in creating, improving, and maintaining high-performance, reliable applications. Experienced in both front-end and back-end development, with the ability to turn complex ideas into simple, effective solutions. Known for problem-solving, learning quickly, and delivering high-quality work that meets user needs and business goals.

Experience

Smart Kitchen Appliances Designed in 2023

Smart kitchen automation system using Arduino and IoT, integrating flame, gas, and temperature sensors to detect hazards and control fire extinguishing, alarms, and lighting, with remote monitoring via mobile app.

Drug Management System Developed in 2024

Drug Management System – A web and mobile application designed to manage the storage, tracking, and distribution of medicines. Includes features for inventory control, expiration alerts, secure transactions, and easy access for both pharmacists and customers.

Art Auction System Developed in 2025

Art Auction System – A web and mobile application that enables users to browse, bid, and purchase artworks in real time. Features secure transactions, live bidding, and a user-friendly experience for both buyers and sellers.

Decision Insight AI Developed in 2026

A machine learning-based web application that analyzes user decisions and predicts regret probability. Built with Flask, JavaScript, and Random Forest model, featuring real-time prediction, API integration, and dynamic result visualization.
